Comprehensive Proposal Management and Document Assembly with PMAPS® WebPro

NAVIGATING PROPOSAL SOFTWARE HAS NEVER BEEN THIS EASY

PMAPS® WEBPRO OVERVIEW

PMAPS® WebPro is the most comprehensive single solution available for managing all of your proposal activities. It is unparalleled in its ability to provide your proposal, marketing, legal/compliance and sales professionals with instant access to company-wide information — anywhere, anytime.

THE CLOCK IS ALWAYS TICKING

Time is money. PMAPS® WebPro is built around a proprietary workflow designed to save time for every individual involved in the process. That means more time for proposal professionals to invest in customizing content; more time for Subject Matter Experts to create and update responses; more time for Compliance Officers to proactively approve standard language on a scheduled basis, and more time for sales to put its final polish on the proposal. That's a lot of time ... and money ... saved by PMAPS® WebPro.

NAVIGATING PROPOSAL SOFTWARE HAS NEVER BEEN THIS EASY

PMAPS Navigation Central represents a function-based intersection for charting whatever proposal activity a user wants to pursue. With integrated Help linked to the 24/7 Library of On-Demand Training Videos and supporting documentation, any user can achieve immediate productivity with minimal instruction.

proposalsoftware PMAPS Navigation Central

- Log a New or Work on Existing Proposal

WEBPRO NAVIGATION CENTRAL

NO CUTTING AND PASTING REQUIRED

PMAPS® proposal solutions have always offered “single-click” insertion from database to RFP or proposal document. PMAPS® WebPro is no different. It comes with a unique tool that allows users to automatically insert a response without the need to cut and paste. Once a search has been completed and the appropriate content found, a single click places the fully formatted content into the proposal or marketing document being created. Fast, simple and convenient ... PMAPS® WebPro.

WEBPRO VIEWER APPLLET

WEBPRO DOCUMENT ATTRIBUTES

WORLD CLASS DATABASE SEGMENTATION

With more than 20 customizable “Attributes” for organizing your data, PMAPS® WebPro offers the most comprehensive and flexible means to sort your data available on the market. Easily filter searches with a single click to quickly identify the most appropriate responses. The speed and accuracy of this “on the fly” ability to pinpoint precise information are otherwise impossible to achieve using any type of folder tree structure. And its intuitive nature drastically reduces training time so that new hires are immediately productive.

SEARCH WHATEVER, WHEREVER, WHENEVER

Using an intuitive Google™-like search engine, PMAPS® WebPro can search through any Microsoft Office™ document (including Word, PowerPoint and Excel), as well as PDF and HTML files. What's more, you can search through the content of your organization's entire website and insert selected content into your RFP or any type of communication, proposal or marketing document being created.

KNOW YOUR HISTORY...

PMAPS® WebPro also allows you to keep track of every item searched and inserted, and it permits each data location to be designated as either a non-compliant or compliant informational source. For documents that are non-compliant, there is a "Get Compliance" mechanism. It alerts users if a document retrieved from a search is from a non-compliant source, then permits the proposal writer to reach out to the appropriate Subject Matter Expert and Compliance Officers, while keeping track of any or all requests pending. This avoids simply presenting a question for answer to the appropriate personnel, who in turn must execute their own search for answers. With PMAPS® WebPro, the proposal writer can now search anywhere with permission, find content that addresses the question being asked, and present it as a draft for review, editing and inserting directly into the proposal document being created. Once approved, the now compliant answer can be imported into the PMAPS® database to avoid repeating both the search and approval process in the future.

ASSEMBLING PROPOSAL DOCUMENTS HAS NEVER BEEN EASIER

The integrated Assembly Center permits Microsoft Word and Acrobat PDF files to be arranged in an outline view and combined into a single document. All aspects of every item can be assigned, tracked and reported on during the proposal assembly process. Furthermore, the Pitch Book module allows the user to assemble PowerPoint or PDF presentations by searching for and then selecting an unlimited number of slides or pages.

PUT PROPOSAL & DOCUMENT ASSEMBLY IN THE PALM OF YOUR SALESPERSON'S HAND

There is also 24/7/365 Smartphone "Preview-Only" access to the PMAPS® WebPro proposal database, which limits the content available by designated sales and marketing personnel. In addition, the ability to generate sales proposals and other customer-facing documents may also be provided remotely, using the proprietary SalesDocBuilder™ tool. This provides sales personnel with the ability to assemble complex documents via a "wizard-like" interface using simple rule-based logic ... requiring no programming skills for setup or maintenance. This "app" works across all smartphone and tablet devices including Apple, Android, Windows Mobile 7, BlackBerry 6 OS and Palm.

MEET ANY BUDGET PARAMETER WHILE PROVIDING AN IMMEDIATE ROI

PMAPS® WebPro may be deployed in three configurations. The first is a hosted SaaS solution, in which Proposal Software maintains all IT requirements and the named users only require a web browser. The second is an “On-Premises” subscription, where the customer installs this powerful web application inside their “firewall” and pays for each named user on a monthly basis. In the third configuration, PMAPS® WebPro can be deployed as a purchased solution. A one-time fee grants the customer a perpetual and unlimited user license for installing PMAPS® WebPro on their own intranet.

In just **10 minutes**, learn how **PMAPS® WebPro** will save you **10 days per quarter**.
